

Syllabus for ME261-01: Energy Storage

Spring 2017

Instructor: Min Hwan Lee

Designation: Energy Storage

Catalog Description: This course is intended to provide students an overview on energy conversion and storage schemes/devices with a major focus on electrochemical energy conversion/storage including fuel cells, ionic batteries and super-capacitors. This course is appropriate for engineering and natural science students interested in having an overview of electrochemical energy conversion/storage schemes covering their basic operating principles, fundamental physics behind them and technological advantages/issues.

Text Books and Other 1) Energy Storage, Robert A. Huggins, Springer

Required Materials: 3) Fuel Cell Fundamentals, 2nd Edition, Ryan O'Hayre et al., Wiley

**Course Objectives/
Student Learning
Outcomes:**

**Program Learning
Outcomes:**

Prerequisites by Topic: Exposure to Thermodynamics is highly recommended, but not mandatory

Course Policies: Homework will be assigned basically bi-weekly. They will be posted on UCMCROPS Tuesdays and due the following Tuesdays. 10% of score will be subtracted for every delayed day. Collaboration is encouraged, but the work that you turn in should be your own. Exams will be held in class, and cover the cumulative materials covered prior to the exam.

**Academic Dishonesty
Statement:** a. Each student in this course is expected to abide by the University of California, Merced's Academic Honesty Policy. Any work submitted by a student in this course for academic credit will be the student's own work.

b. You are encouraged to study together and to discuss information and concepts covered in lecture and the sections with other students. You can give "consulting" help to or receive "consulting" help from such students. However, this permissible cooperation should never involve one student having possession of a copy of all or part of work done by someone else, in the form of an e mail, an e mail attachment file, a diskette, or a hard copy. Should copying occur, both the student who copied work from another student and the student who gave material to be copied will both automatically receive a zero for the assignment. Penalty for violation of this Policy can also be extended to include failure of the course and University disciplinary action.

c. During examinations, you must do your own work. Talking or discussion is not permitted during the examinations, nor may you compare papers, copy from others, or collaborate in any way. Any collaborative behavior during the examinations will result in failure of the exam, and may lead to failure of the course and University disciplinary action.

Disability Statement:

Accommodations for Students with Disabilities: The University of California Merced is committed to ensuring equal academic opportunities and inclusion for students with disabilities based on the principles of independent living, accessible universal design and diversity. I am available to discuss appropriate academic accommodations that may be required for student with disabilities. Requests for academic accommodations are to be made during the first three weeks of the semester, except for unusual circumstances. Students are encouraged to register with Disability Services Center to verify their eligibility for appropriate accommodations.

Topics:

Class/laboratory

Schedule:

Midterm/Final Exam

Midterm (TBD; CLSSRM 205)

Schedule:

Final (May 8; CLSSRM 205)

Course Calendar:

Tentative Weekly Schedule

Week 1 Types of Energy Storage

Week 2 Basic Thermodynamics (Enthalpy, Gibbs Free Energy, Nernst Equation)

Week 3 Fuel Cell – Introduction and Open Circuit Voltage

Week 4 Fuel Cell – Activation and Ohmic Losses

Week 5 Fuel Cell – Mass Transport Loss

Week 6 Fuel Cell – Modeling, Types, Systems

Week 7 Review Session and Midterm Exam

Week 8 Electrochemical Characterization – Polarization Curve, EIS

Week 9 Ionic Batteries – Terminology and Principles, Phase Diagram

Week 10 Ionic Batteries –Electrodes

Week 11 Ionic Batteries –Modeling; Flow Battery

Week 12 Super Capacitor – Principles and Operation

Week 13 Electrochemical Characterization – Cyclic Voltametry

Week 14 Thermal and Mechanical Energy Storage

Week 15 Review Session and Final Exam

Professional Component:

Assessment/Grading

Grading

Policy:

Homework = 10%

Midterm = 40%

Final = 50%

Grades will be given using the Curved Grading system.
